A New Way To Create Puzzle Books: Introducing Mystery Number Search Builder

Puzzle books continue to be a popular publishing category, but for publishers, one of the challenges is finding new ways to create puzzles that feel different from the thousands of traditional word searches, number searches and activity books already available.

That is where **Mystery Number Search Builder** takes a different approach.

Rather than simply asking readers to find numbers hidden inside a puzzle, Mystery Number Search puzzles turn the activity into a small mystery-solving challenge.

Readers first search the puzzle to find the hidden numbers. They then take the required digits, match those numbers against an alphabet code and gradually reveal a hidden mystery word or phrase.

The result combines number searching, decoding and mystery solving into one activity.

More Than Just Another Puzzle Idea

Coming up with a puzzle concept is one thing.

Actually creating all the individual puzzles needed for a book can be another matter entirely.

Manually placing numbers, creating hidden sequences, working out the codes and producing the finished pages can quickly turn a simple book idea into hours of work.

Mystery Number Search Builder was created to handle that process.

Instead of giving publishers another collection of prompts or instructions to take somewhere else, the Builder creates the actual puzzle pages.

Choose what you want to create, enter your mystery content and let the Builder do the puzzle-building work.

Once you're happy with the result, you can export your finished pages and start putting your book together.

Find The Numbers. Crack The Code. Reveal The Mystery.

The basic concept is easy for readers to understand.

Find the hidden numbers.

Each puzzle contains numbers that the reader needs to locate.

Crack the code.

The relevant digits are matched against the supplied alphabet code.

Reveal the mystery.

Each decoded letter takes the reader another step towards discovering the hidden word or phrase.

That extra decoding element gives publishers another way to turn a straightforward number-search activity into something with a goal at the end.

Create Books Around Different Themes

One of the interesting possibilities with Mystery Number Search puzzles is the ability to build books around different themes.

A mystery doesn't have to mean detectives and crime.

The hidden answers could be based around dinosaurs, secret agents, history, pirates, space, animals, adventure and many other subjects.

That means the underlying puzzle system can potentially be adapted into different books and series rather than being restricted to one particular topic.

Publishers can concentrate on choosing the audience, theme and mysteries while the Builder handles the actual puzzle creation.

Built For Publishers Who Want A Finished Result

There has been an explosion of tools that generate ideas, prompts and suggestions.

Those can be useful, but they often leave the publisher with most of the work still to do.

Mystery Number Search Builder has been designed around a different principle:

Use the tool and come away with something you've actually created.

You don't need to manually construct every puzzle from scratch, and you don't need complicated puzzle-design software to get started.

The aim is to make the journey from **book idea to finished puzzle page** much simpler.

See Mystery Number Search Builder In Action

If you're publishing puzzle books, activity books or looking for a different book concept to explore, **Mystery Number Search Builder** is worth taking a look at.

You can see examples of the puzzles, discover how the system works and watch the Builder in action on the official launch page.

Mystery Number Search Builder launches September 16th at 10:00 AM EST.

The special launch price will be **\$37**.
