Mystery Number Search Builder Review: A Different Approach To Creating Puzzle Books

If you're publishing puzzle books on Amazon KDP, you've probably seen plenty of software designed to help you generate word searches, number puzzles and other activity-book content.

Mystery Number Search Builder takes a different approach.

Instead of creating another standard number-search puzzle, it combines **number searching, code breaking and mystery solving** into a puzzle format where readers have an actual answer to uncover.

In this review, we'll look at what Mystery Number Search Builder does, how the puzzles work and what you actually get from the software.

What Is Mystery Number Search Builder?

Mystery Number Search Builder is a browser-based puzzle creation tool designed to help publishers create **Mystery Number Search puzzle pages**.

The basic idea is simple:

Find the Numbers → Crack the Code → Reveal the Mystery

Readers search the number grid for hidden number sequences. They then use the puzzle's decoding system to convert those numbers into letters and gradually uncover the hidden mystery word or phrase.

This adds another layer to the traditional number-search format because finding the numbers isn't the end of the puzzle.

The reader still has a mystery to solve.

What Makes It Different?

One of the biggest differences is that Mystery Number Search Builder isn't simply an idea generator or prompt builder.

It creates the actual puzzle.

That's important because many publishing tools still require you to take their output into another application and do much of the creation work yourself.

With Mystery Number Search Builder, the software handles the puzzle-building process and gives you a finished result that can become part of your book project.

For publishers who would otherwise have to construct these puzzles manually, that can remove a considerable amount of repetitive work.

How Does Mystery Number Search Builder Work?

The Builder has been designed around a straightforward workflow.

You choose the settings for the puzzle you want to create and provide the mystery content.

The Builder then creates the number-search puzzle and corresponding decoding system.

Rather than manually placing number sequences and working out how every part of the puzzle connects together, the software handles the construction for you.

Once the puzzle has been generated, you can review the result and export your finished puzzle pages for use in your publishing project.

This makes it possible to move from an idea to an actual puzzle without needing specialist puzzle-design software.

What Kind Of Books Could You Create?

This is where the Mystery Number Search concept gets interesting.

The puzzle mechanism isn't tied to one particular subject.

You could potentially build Mystery Number Search books around themes such as:

Detective Mysteries

Readers search for numbers and decode clues connected to different mysteries.

Secret Agents

Turn each puzzle into a code-breaking mission.

Dinosaurs

Young puzzle fans can solve the number puzzles to uncover different dinosaurs.

Pirates

Search for numbers and decode pirate-themed mysteries, treasures or locations.

Animals

Build puzzles around different animals, wildlife or nature themes.

Space

Create missions involving planets, astronomy and space exploration.

History

Use historical people, places and events as the mysteries readers need to reveal.

And those are only examples.

Because the mystery content can change, publishers have room to explore different audiences, themes and potential book series.

Is It Difficult To Use?

You don't need to know how to program a puzzle generator or manually calculate every number placement.

That's really the point of the Builder.

The software handles the complicated part while the publisher concentrates on the **book idea, theme and mystery content**.

If you've previously avoided creating more complicated puzzle books because of the amount of manual work involved, this could make that process considerably more approachable.

Does It Use AI To Write The Book?

This isn't being sold as an AI book writer.

The purpose of Mystery Number Search Builder is much more specific:

It builds Mystery Number Search puzzles.

You remain responsible for deciding what kind of book you want to create, your audience, your theme and how you ultimately publish and market the finished book.

That's actually one of the things that makes the software interesting.

Instead of trying to do absolutely everything, it focuses on doing **one specific creation job**.

What Do You Actually Get?

The main product gives you access to **Mystery Number Search Builder**, allowing you to create the core puzzle pages for your projects.

During the launch there are also optional upgrades available for people who want to expand what they can do.

Mystery Words Mega Library provides additional mystery-word content that can be used when developing puzzle ideas and books.

There is also **Mystery Video Book Trailer Studio**, a separate browser-based application for turning your book covers, promotional images and marketing messages into short promotional videos.

These are optional upgrades. You don't need to purchase them to use the main Mystery Number Search Builder.

Mystery Video Book Trailer Studio

The Video Studio is an interesting addition to the funnel because it tackles a completely different part of publishing:

What do you do after the book is published?

It allows publishers to create promotional book trailers in:

9:16 Vertical

1:1 Square

16:9 Landscape

Trailers can be created at **10, 15, 20 or 30 seconds**, with uploaded book images, promotional text, music, background choices and live preview.

The finished trailer can then be exported as an **MP4 video**.

The sales material includes examples created for actual published books, so you can see the type of finished result the Studio produces before deciding whether the upgrade is useful to you.

Mystery Number Search Builder Price

Mystery Number Search Builder has a regular price of:

\$47

During the launch, it is available for:

\$37 One-Time

There are optional upgrades presented after purchasing the main Builder, but purchasing those upgrades is not required to use the Front-End product.

What I Like About Mystery Number Search Builder

The strongest point is probably that **the output is the product you're trying to create**.

You're not buying a PDF explaining how to make number puzzles.

You're not getting another prompt that you then need to paste into another tool.

You're using a dedicated Builder to produce the actual Mystery Number Search puzzle.

The mystery-decoding concept also gives publishers room to explore different themes rather than being restricted to one book idea.

And because the process can be demonstrated visually, it's very easy to understand what the software actually does before buying it.

Things To Keep In Mind

Mystery Number Search Builder isn't a magic button that guarantees you'll make money publishing books.

You'll still need to decide what books to create, research your market, prepare the complete book, create your cover, publish it and promote it.

There are also no guarantees that any particular book you create will sell.

What the Builder does is much more practical:

It removes much of the work involved in creating this particular type of puzzle.

That's the result you should judge it on.

Mystery Number Search Builder Review: Final Thoughts

If you're looking for another generic prompt generator, Mystery Number Search Builder probably isn't what you're looking for.

But if you're interested in creating puzzle books and want a tool that produces an **actual finished puzzle result**, it's worth taking a closer look.

The combination of **number searching, decoding and mystery solving** creates an interesting twist on traditional puzzle formats, while the Builder removes the need to manually construct every puzzle yourself.

At the **\$37 launch price**, the easiest way to decide whether it's right for you is to look at the examples and watch the Builder in action.

Find The Numbers. Crack The Code. Reveal The Mystery.
